

Norton Secure VPN

The freedom to connect more securely to Wi-Fi anywhere.

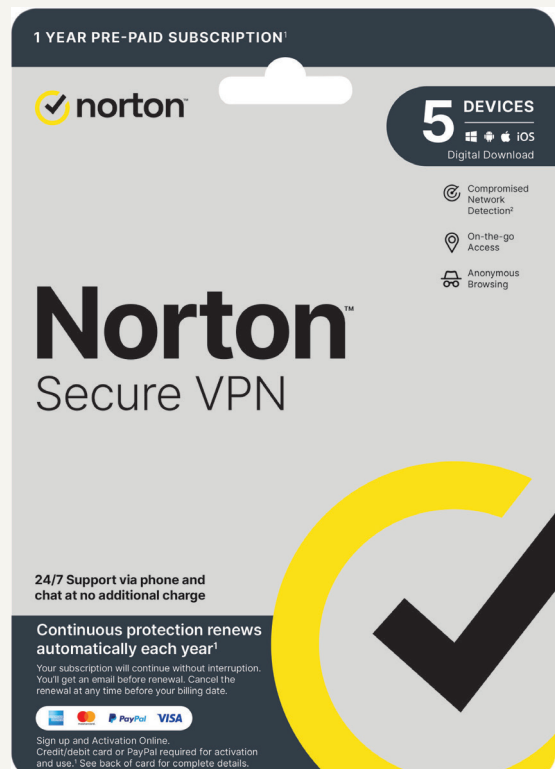

Help take back control of your online privacy.

Wi-Fi connections can be risky; and not just public Wi-Fi, but the password protected Wi-Fi in your home.

That's why Norton Secure VPN uses bank-grade encryption to help secure your connections and block cybercriminals from stealing your personal information.

Take back control of your online privacy with Norton Secure VPN.

Opt-in to Cyber Safety[™]

Take your online security to the next level.

Features

Bank-grade encryption for your online privacy and security

Bank-grade Wi-Fi security encryption means you could use your Mac®, PC or mobile device for secure browsing, even on public Wi-Fi hotspots and unsecured networks.

Enjoy your online freedom while traveling

Enjoy full, unmetered bandwidth with your subscription. With Norton Secure VPN you may even access your favourite websites, videos, or apps as if you were at home.

Protection for your information on public Wi-Fi

Go online in public spaces like coffee shops, airports or hotels without worrying about cybercriminals intercepting the information you send and receive on a shared network.

Browse with greater anonymity on our no-log VPN

Your online privacy is important. Know it's private with our no-log VPN policy. This means we do not track or store a record of what you do online.

Split Tunneling*

Choose which traffic you want to encrypt. Helps secure your sensitive activity, like online banking or healthcare data, while letting other apps and services access the internet directly, so the content isn't blocked.

System Requirements
